

## On the Subject of Dumb Waiters

*America, we have unfortunate news. Fish has died in an elevator accident.  
Elevator!*

- 8 players, including yourself, are participating in a game of *Trivia Murder Party 2* and have encountered a “Dumb Waiters” minigame.
- Dumb Waiters consists of two elevators. Each player must anonymously pick one elevator. If everyone picks the same elevator, or the elevators are perfectly balanced, everybody will survive. If that is not the case, everybody in the elevator with more people will die.
- The 7 other players have their names displayed along the top and bottom of the module.
- Every player has made their decision except for you, and your pick will end the game.
- Make the choice that will cause you to survive. If both choices will cause you to survive, make the choice that will result in more people surviving overall.

The other players have made their choice in a specific order. If the left elevator has a green base, associate each player with their number in the table, otherwise, use the number in parentheses. If the right elevator has a red base, put them in ascending order, otherwise, descending.

Use the following conditions to determine what the players have chosen. These conditions describe what will cause a player to choose the left elevator.

1. **TasThing:** Number of people who have chosen already is even.
2. **Deaf:** There is a player whose name begins with a vowel, and they have not chosen.
3. **Blanas2:** There is a player whose name contains a number, and they have not chosen.  
(Does not consider himself.)
